University students interested in archaeology or cultural resource management are encouraged to apply for the 2016 Adelphi in Alaska Archaeological Field School. With an instructor-to-student ratio among the lowest available, you will experience a vast wilderness, participate in ongoing research, and make new discoveries. Research will focus on the newly discovered Holzman site along Shaw Creek where large mammal bones, mammoth ivory fragments, and stone tools have been found dating back to the end of the last Ice Age. Join our research team in the scenic Tanana Valley as we investigate the question, who were the First Alaskans? Undergraduate students can enroll in 4 credits and contribute to a multi-year research program. Learn archaeological methods involving 21st century field-based technologies including GPS, GIS, and total station. In addition to a true wilderness experience, students learn basic principles of site mapping, excavation, and soil formation as well as orienteering, professional survey, and remote living. Enjoy Alaska camping and explore the ancient past!

Join the expedition today!

Students are responsible for airfare and travel expenses to and from Fairbanks, Alaska. For more information, contact Prof. Wygal at bwygal@adelphi.edu or (516) 877-4111. For additional field opportunities through Adelphi visit http://anthropology.adelphi.edu.
