HAVE YOUR VOICE HEARD

Are you a current or former participant in a Breast Cancer support group?

Participate in a Research Study and share your experiences in Breast Cancer Support Groups.

WHAT IS THE PURPOSE?

The purpose of this study is to better understand the long term benefits as identified by participants in breast cancer support groups. This survey will identify common reasons for attending a support group, their identified benefits, overall experiences, and the long term impact on their survivorship. Identifying these factors will allow breast cancer agencies to plan and facilitate more sustainable support groups.

YOU CAN PARTICIPATE IN THIS STUDY IF YOU:

- Have ever participated in a breast cancer support group
- Are over the age of 18

This survey is being conducted by Erin Nau, LCSW and Hillary Rutter, LCSW of the Adelphi NY Statewide Breast Cancer Hotline & Support Program.

This survey will be conducted online. All information will be confidential.
Your participation in this study is 100% voluntary and should only take 5-10 minutes.

If you would like to participate please [click here](#).

**If you have any questions, please contact
Erin Nau enau@adelphi.edu or Hillary Rutter rutter@adelphi.edu**

Thank you for participating in the survey. Please share this survey with others who might qualify.

**Participate in a Research Study on
Geriatric Assessment for Patients 70+:**

Bridging the GAP to Improve Chemotherapy Toxicities

This study is being conducted to find out if a Geriatric Assessment (survey) can help improve and develop a standard approach for reducing side effects from chemotherapy in older patients with cancer.

**For more information about this study,
please [Click here](#) to see the brochure.**

If interested, speak with your doctor or contact **Dr. Vincent Vinciguerra**
at North Shore-LIJ Health System, Monter Cancer Center

Research Participants Needed for Study Of Early Onset Breast Cancer

A research study is being conducted at The Feinstein Institute for Medical Research, part of Northwell Health, to learn more about how genetic variants act and are influenced by other genes or environmental factors in the development of breast cancer before the age of 40 years. The researcher, Annette Lee, PhD is recruiting women with and without BRCA mutations who were diagnosed with early onset breast cancer to participate in this study.

The purpose of the study is to learn more about how genetic variants influence the development of breast cancer in women under the age of 40 years. Ultimately the researchers hope this knowledge can prove useful for determining individual risk of developing early onset breast cancer.

To participate in the study, you must be over the age of 18, and have been diagnosed with breast cancer before the age of 40. If you choose to participate, you will be asked to provide a saliva sample (less than 1 teaspoon) and provide information about yourself, your medical history and your family history. The sample and information you provide will be used for this study and also stored in a specimen bank for use in additional future studies.

To learn more about this study, please contact the study nurse at 516-562-8377 or tdp@northwell.edu
